

DURING COVID-19 OUTBREAK

WE CARE ABOUT YOUR BABY'S MOVEMENTS JUST AS MUCH AS YOU DO

One of the surest signs of things not being all well with your baby is an irregularity or a change in its movement.

Evidence shows that about fifty percent of stillbirths occurred when a baby's movement either changed or completely stopped.

It is very important that you contact your doctor, midwife or hospital immediately. Should you notice any such change, do not hesitate for a moment in doing so.

We care for you
and your baby

If we must continue to stay together, we must now stay apart.

FERNANDEZ FOUNDATION strongly supports Physical Distancing to fight COVID-19
