

## ***TIPS FOR HEALTHCARE PROFESSIONALS***

*Little things that can make a big difference.*

- **Carry as few items with you to work as possible. Avoid handbags, purses, laptop bags, additional mobile phones.**
- **Always carry a personal hand sanitizer with you. Use it every time you make contact with a person or object, even things like door handles, keys, keyboards or elevator buttons.**
- **Use as much protective gear as possible from the time you enter the hospital, until the time you leave.**
- **Do not leave any belongings of yours where they can come in contact with other persons - especially on the hospital premise.**
- **Be vigilant. If you see someone with even the slightest sign of the COVID19 symptom, alert your superior immediately.**
